

ATM SIMULATOR: JAVA-BASED BANKING

PROJECT ID:

KLH/SPPJ/S11/11

PROJECT MEMBERS:

V Bhargav Krishna

D Harshith Varma

P Aditya

DATE:

September 15, 2026

PROJECT OVERVIEW

A Java-based ATM Simulator that replicates core banking operations in a secure environment

Includes authentication, balance check, deposits, withdrawals, transaction history, and exit

Built to demonstrate key programming concepts through practical application

Provides a safe, realistic way to learn and practice banking workflows without real accounts

AUTHENTICATION AND TRANSACTION MENU

01

Secure login with account number and PIN

02

Access core transactions:
balance, deposit, withdraw, recent transactions

03

Built-in validation to ensure accurate and authorized actions

04

Exit cleanly and securely

CORE PROGRAMMING CONCEPTS

DEMONSTRATED

Object-oriented design models real-world entities

Conditional logic controls access and transactions

Loops keep the menu running until exit

Input validation ensures secure, accurate entries

Data management updates balances and history

BENEFITS AND PRACTICAL APPLICATIONS

SIMULATED EXPERIENCE

Safe practice of ATM operations without any risk

Understand the programming logic and banking workflows

Easily extend with new features like multi-account support or persistent storage

Ideal tool for learning Java application development

VS

REAL EXPERIENCE

Risk of financial errors and data exposure

Limited visibility into backend processes

Changes require access to live systems

Higher cost and complexity for testing and learning

THANK YOU AND QUESTIONS

thank you for your attention
questions and discussion welcome

we appreciate your engagement
let's continue the conversation
